Re: Chrysler Chemical  
MI00024111  
Facility #820289

Dear Mr. Lancucki:

On July 15, 1986, this office conducted a wastewater survey at Chrysler Corporation Chemical Division, 5437 West Jefferson, Trenton. The purpose of the study was to determine facility compliance with water quality regulations and to collect point source data for the State/EPA/Canadian study of the Upper Great Lakes.

The facility met the National Pollutant Discharge Elimination System (NPDES) permit final effluent limitations for outfall 003 during the survey. The effluent, in addition to the permit parameters, was analyzed for a number of pollutants including organic compounds, metals and nutrients. The data will be further reviewed to determine if additional monitoring or regulation is needed. A copy of the survey report is enclosed for your review.

An aquatic toxicity assessment was done on outfall 003 effluent in conjunction with the survey. The effluent was not acutely toxic to Daphnia magna during a 48 hour exposure. A report on the assessment is enclosed for your review.
